

SAP Data Archiving Toolset (SDAT) Extending ILM and Data Archiving to the Next Level

Developed by Industry-Leading SAP Archiving and ILM Specialists

As an outgrowth of our SAP data archiving and document imaging practice, Auritas has developed many tools and utilities that both extend the capabilities of SAP technologies and bring productivity gains.

Our consultants are constantly expanding these tools based on the changing nature of archiving and ILM technologies, and are backed by our offshore product development division to ensure compatibility with SAP upgrades.

We use these tools in our consulting engagements, and provide many of them to our clients at no additional cost:

- **Recreate Outgoing Documents** • SAP has a limitation that archive data cannot be used for re-creating outgoing documents. To comply with IRS and other customer/vendor requirements, creation of invoices and purchase order is necessary requirement. The other method is to create a PDF output and put it on a Storage Medium. You would need a storage solution and a good amount of space to manage those documents. Auritas solution is able to Re-Create all those documents from documents from archive files. You can use different forms and the output could be email, pdf, print output as per your preference.
- **Automatic Document Close** • As you start implementing data archiving you very quickly realized that the documents you intend to delete like financial documents purchase orders, production orders do not get archived. There are different reasons for them not to archive including document not closed, not technically completed or follow on documents not closed. Auritas automatic document close program is precisely able to help you. It will help you identify the records that cannot archive, the reason why they can not archive and what process you can use to get those documents archived. The tool further assists getting those documents closed based on the criteria you define.
- **Automated Archive Enabling** • The biggest hurdle any archiving project has is trying to understand how many reports and transactions need to be archive enabled and what would be the effort and time required to archive enable them. Auritas automatic archive enabling tool make those reports the archive enabled automatically. The helps archive enables those reports no matter how many archive objects are involved in accessing data from archive files. The solution can also archive enable your BW extractor's and get seamless access to online and archived information in shortest possible time.
- **Document/Image Migration** • Due to various reasons, companies require handy tool to migrate document/images - linked to SAP documents - from existing storage solution to new storage solution. We have developed and deployed a tool that seamlessly migrates SAP document images from one storage to another. It works with all major industry storage solutions such as IXOS, IBM FileNet, SAP Cont server, Documentum, etc. The tool also logs migration data in SAP for any legal compliance or troubleshooting. The tool supports migration of all major file types such as DOC, XLS, PDF, MSG, TXT, PPT, and others.

AURITAS TOOLS AND UTILITIES

- **Database Analysis** • Based on historical growth and system usage, the tool projects future growth. The tool allows users to flexibly change the future horizon for the projection. The analyst can save the snapshot of the project and can also compare the historically saved projections with current projection for accuracy and comparison.
- **Where-used Analysis** • In order to identify which report/programs could be impacted due to archiving, we have developed Where-used analysis tool that not only displays reports which may need archive enabling but also lists who used the it. This combination allows the analysis to intelligently determine the actual usage of the report/program requested for archive enabling.
- **Archiving-effectiveness Analysis** • On many occasions we have noticed diminishing return on archiving jobs after go-live. This could be either due to change in configuration that prohibits archiving, failure to schedule ongoing archiving jobs, etc. The tool provides graphical interface in SAP chronologically. It aids the manager to monitor the archiving job effectiveness and act if necessary without looking at job logs or any report.
- **Legal Hold Search** • Enables searches of online and archived data and documents based on record origination criteria such as legal entity, master data and transactional data.
- **BW DART Access** • Provides ability to load historical and ongoing DART extracts into BW cubes, and enables IRS and BW dynamic reporting from BW InfoCubes.
- **Data Growth Predictor** • Predicts future storage costs by modeling the growth of the enterprise data footprint, based on various parameters, and presents a detailed database analysis in a single dashboard.
- **Data and Document Viewer** •
- **DRB Document Access** •
- **Split Archive Files** •

Auritas Can Help with Any Archiving, Imaging or ILM Requirement

We have decades of archiving experience, having served hundreds of the world's largest and most complex organizations in the world. Before you chose an ILM services partner, make sure you've got all of your options on the table.
